medvl	"Gafat, on the south-western periphery of the Christian empire, was inhabited by a population speaking a Semitic language related to Adaré and the Guragé tongues. The province, or at least parts of it, became tributary to the empire in early medieval times. -- it is reported, in the <i>Gädlä Yaréd</i> , to have come under Zagwé rule in the twelfth or thirteenth century. -- Gafat was later the site of missionary activity by several of Täklä Haymanot's followers. They included Abba Qäwestos (d. 1340's) -- and Abba Anoréwos (d. 1374). Despite their efforts the Gafat people seem to have remained largely animist. [Pankhurst 1997 p 89]		
1400s	Gafat by the fifteenth century was firmly under imperial rule. - Some conversions to Christianity took place during Zär'a Ya'qob's reign /1433-1468/. - Gafat was situated north of Damot, though south of the Blue Nile. The province was essentially animist. Many conversions were carried out by a holy man called Mäb'a Seyon, but failed to have long- term consequences. The territory was regarded as a place of some importance, and was listed by Lebnä Dengel /1508-1540/ as one of his domains. [Pankhurst 1997]		
1500s	"Gafat -- was pejoratively referred to by Shihab ed-Din as a place inhabited by a nomadic people, who did not know the <u>Qur'an</u> -- At the beginning of /Imam Ahmäd's invasion/		

soldiers from Gafat, together with others -- formed part of Lebnä Dengel's great southern army -- When 'Abd en-Nasir marched into Kämpata the people of Gafat -- joined in the resistance, but were defeated, and suffered heavy casualties. Lebnä Dengel's son, and future successor, Gälawdéwos, according to Bermudes, later found refuge in the Gafat country.

- 1540s The Gafats, though willing to fight against the Imam's invasion, were reluctant to receive the Emperor's retreating army. They doubtless feared that to do so would result in the customary looting by the soldiers -- When -- Lebnä Dengel's kinsman Daharagot fled into Gafat, the inhabitants -- ordered the chief not to enter their country, but he forcibly did so. The Gafats thereupon gathered to oppose him. Taking up their positions in a muddy area, in which the feet of their opponent's horses would sink, they hid in the nearby trees. Daharagot had no idea of their presence until they suddenly attacked with their spears -- He had with him two hundred cavalrymen, who -- fell victim to the Gafat's spears -- Daharagot and only a few of his followers escaped. -- the fighting doubtless took place in the marshy land of what is now the Chomän swamps --" [Pankhurst 1997 p 215-216] "After Imam Ahmäd's defeat /1543/ Emperor Gälawdéwos, angered -- by the arrogant behaviour of his former allies, the Portuguese, banished Bermudes for a time to Gafat. There the prelate had the opportunity to gather information --" Gälawdéwos returned to Gafat in 1548-49. "This campaign was carried out because the Gafats had been in rebellion since Lebnä Dengel's death, and had refused to pay Gälawdéwos their tribute, or to recognise him as their master. On the arrival of his army the Gafats gathered together, and one morning at dawn suddenly attacked the imperial camp, inflicting many casualties. A group of Portuguese near the monarch's tent heard the noise and, being well armed, easily drove the Gafats away, killing several of them. The Portuguese then pursued the fugitives to their villages - - Gälawdéwos did not remain long in the province, Bermudes reports, because he did not want to do the Gafats 'great damage', but wished 'merely to frighten them'. The rainy season was moreover drawing near --" [Pankhurst 1997 p 260]
- 1560s "-- in 1566 or 1567, Särsä Dengel came into conflict with the Gafats of Bérébabo, who had supported another rebel called Fasilo. Särsä Dengel made war on them, killed many of their soldiers, after which, as was customary, he destroyed the grain of the defeated populace, and reduced their women and children to slavery." [Pankhurst 1997 p 262] "When Sarsa Dengel succeeded to the throne in 1563, Hamalmal, the old general, rebelled against the young king. During the interval between his quarrel with and reconciliation to Sarsa Dengel, Hamalmal settled in western Shawa with his large army. The pagan Gafat tribes of this area became an easy prey and the victims of plunder by his soldiers. 'Hamalmal had overlooked the problems of feeding the continuously increasing regiments. Gafat villages of Endagebatan and the neighbouring district of Gendabarat were wantonly pillaged.' Many Gafat chiefs, who were outraged by the pillage, saw the salvation of their people in submission to Sarsa Dengel. Hamalmal thereupon reconciled himself to the young king, but the plight of the people of Gafat continued. -- In their shortsighted policies, the Christian political and military leaders were not only causing the slow death of the Gafat people, but were creating as well a vacuum into which the pastoral Oromo would move. Thus a few years later, when the first group of Borana cavalry passed through the region, Gafat had no strength left to resist. The Gafat pastoralists who were impoverished, and the farmers who were uprooted against their will, had either to submit to the Oromo and become part of them, or to run *en masse* across the Abbay, to seek refuge in the province of Gojjam. Some did the one, some the other." [Mohammed 1994 p 30-31]
- 1580s Särsä Dengel's main contact with the Gafats took place in 1585, when he attempted the large-scale conversion of much of the south-west. He made his way to the Gafat territory of Shat. Its people tried to resist, but were defeated. After enforced baptism the Emperor allocated the Gafats a bishop, priests and deacons. They soon returned to their old ways. The priests feared for their safety, fled Gafat, and installed themselves in Damot.
- 1590s Around 1591 Särsä Dengel carried out a further expedition to Gafat. This took him to

Wämbärya. After a seven day march his army reached the territory, without the knowledge of the Gafats, and immediately attacked them, and burnt down many of their houses.

"Särsä Dengel announced that he would spend the rainy season in the area. This alarmed many of his men whose only desire was to return to their wives and children. Other soldiers, however, preferred to remain in the area in the hope of obtaining booty. On the following day the monarch ordered his commanders with their troops to loot the country from one end to the other. -- The Emperor then chose a nearby open space, where he and his men set up their camp for the rainy season."

"A month or so later /the Emperor's/ advisers -- decided after much deliberation that it was inadvisable to spend the rains in either Gafat or Damot. -- The Emperor, who was accustomed, as his chronicler claims, to follow good advice, readily agreed. The Gafats, obviously much pleased at the army's imminent departure, paid nominal homage to the monarch, and declared that the looting he had carried out would be their punishment." [Pankhurst 1997 p 262-264]

1600s "Contacts between the Gafats and the Christian empire came to the fore once more during the reign of Susneyos /1606-1632/, which also witnessed the advent of the Oromos in the area. -- His first encounters with the Gafats were peaceful. During a famine in 1597-8, almost a decade prior to his accession to the throne, he was befriended by a Gafat called Fesen -- The man saved him and his followers from hunger by presenting them with a herd of cattle, which he had stolen in Gojjam. By this gift he established good relations, for the time being at least, between the prince and Gafats living on the borders of Gojjam and beyond the Blue Nile. --

Later, around 1600, young Susneyos made his way to the land of a Gafat group called Abädray -- proceeded to the Gafat area of Yäzämbäl where, however, his soldiers indulged, as was their wont, in extensive looting. -- The prince then set forth for Wämbärma and, encountering a Gafat group called Yasubli, captured many of its cattle. -- in 1600-1601 Susneyos attacked another Gafat group, the Ashmän, from whom he seized much livestock. He then made his way to the Wäläqa River, where several Gafat groups -- came forward to confront him. -- Fighting fiercely his men crossed the river, and were at once faced by another Gafat group, the Harb Akäl, who lived on the other side. -- /After negotiations/ the Harb Akäl received Susneyos in peace, and allowed him to depart with his booty. The Ashmän and Wängé also abandoned the struggle. Realising that they were unable to wrest away the loot, they dispersed, each to his own territory. Susneyos then left Gafat, but soon returned. He is said to have 'destroyed' the Gafat group of Den, as well as 'all the Gafats' beyond the Blue Nile.

It was around this time that the Oromos appeared in the locality. One of their first encounters was with the Gafat clan of Den, who as a result abandoned their former country, and fled into Gojjam. Their old area of settlement was left a wilderness and, the chronicle claims, remained so for a very long time." [Pankhurst 1997 p 344-345]

"-- the Libäns, reportedly the largest of all the Oromo groups, moved forward in 1608-9, and seized many Gafat cattle. -- While returning with their booty they were, however, attacked by Susneyos. A fierce battle was waged, in which the Oromo suffered serious casualties.

Further Oromo attacks on the Gafats were reported around 1621-2. -- By the early seventeenth century a large part of the Gafat territories, according to Almeida, had been occupied by the Oromos. -- Many Gafats -- married Oromos -- Others again fled -- As a result of this northward move the term Gafat, which, like that of Damot, had hitherto applied to the area south of the Blue Nile, came to refer to new areas of settlement north of the river. These were for the most part in Gojjam, but to some extent also in Bägémder." [Pankhurst 1997 p 346-347]

1850s "Téwodros's -- awareness of the need for mechanical and other innovations in the military field caused him to accept with enthusiasm an offer by the former Protestant missionary Samuel Gobat -- to provide him with missionary craftsmen. These artisans, who were Swiss-Germans trained -- near Basle in Switzerland, consisted of Messrs. Bender,

Kienzlen, and Mayer who arrived in 1855, and were joined three years later by two colleagues, Waldmeier and Saalmüller. Gafat soon became the site of a royal workshop and arsenal."

[R Pankhurst, A social history of Ethiopia, (1990)1992 p 322]

"Several technically-minded foreigners, who had come to Ethiopia independently to seek their fortune, were also settled at Gafat. They included Mauritz Hall, a Polish Jew who was said to have deserted from the Russian army, Bourgeaud, a French gunsmith who had previously lived in Egypt, his compatriot Jacquin, a metal worker, and the enterprising German scientist Dr. Schimper, a renowned botanist who incidentally devised a way of producing local champagne. At Gafat these and other foreigners worked together fairly harmoniously. They served, Heuglin notes /1868/, as smiths, carpenters, engineers, saddlers, carriage-builders, and even armourers and manufacturers of cannon. They were hard-working, and -- before long erected a powerful water wheel to power different kinds of machinery."

"The foundry at Gafat, which deserves an honourable place in the history of Ethiopian technology, made use, according to Waldmeier, of three feet high furnaces, which were operated with the help of traditional skin bellows -- The coal for the foundry came from Chelga and the right bank of the Gälila river where there were six seams -- while the lime was obtained from Däbrä Tabor and Dälanta.."

[Pankhurst 1992 p 322]

1860s

"The foreigners at Gafat were not allowed to leave the country, but were well treated by their royal master, who, whenever in the neighbourhood, paid frequent visits to inspect the progress of their labours. The monarch, Rassam noted in 1866, used to go down almost every day to see his artisans at work. -- The labour force is said to have comprised 200 Christian Amharas, 300 Gallas, and 200 Fälashas, some of whom the proselytising missionaries succeeded in converting."

"The foreign artisans built -- a water-mill capable of cutting wood and grinding and sieving gunpowder, and a fine house with glass doors and windows. The entire compound was protected by a strong wall guarded by four cannon. The remains of these buildings and the surrounding wall can still be seen. Abbäbäw Yégzaw, an Ethiopian scholar from the area who revisited it in 1971-72, claimed that amid the ruins he was able to discern the manner in which water had been made to flow into four compartments. -- remains of iron and glass are still found. The elders of the area know what each compartment was used for. This is where the charcoal was prepared; here was the area for smelting --" [Pankhurst p 323]

"The highlight of the craftsmen's presence at Gafat was the manufacture of cannon -- in 1861 a French metal-caster called Jaquin declared his willingness to make a mortar if assisted by other craftsmen at Gafat. -- a blast furnace was built and a bellows installed. The iron was carried on the back of loyal servants from far away. After much time and many efforts the day for pouring arrived. A great crowd stood around the furnace awaiting the happy result while the others worked the bellows with great speed hoping for a great reward from the King. ... M. Jaquin soon noticed that the work had failed, for the furnace, which was made out of poor material, had melted before the iron reached melting-point. The Frenchman began to lament and weep; he went half-mad, cried wildly, and finally asked the King's permission to leave." [p 323]

After Jaquin's departure, Tewodros asked the other artisans "to devote their attention to making a blast-furnace for the manufacture of guns. At about this time the enterprising Polish Jew, Moritz Hall, succeeded in casting a small mortar and some bullets. -- /Tewodros/ gave Moritz orders to cast a bigger one ... Herr Moritz said, 'I am unable to undertake such a work, but if the Europeans at Gafat help me I hope to be able to oblige your Majesty.' -- Téwodros then ordered Waldmeier and his comrades to help the project in every way." The artisans after "unspeakable effort" succeeded to smelt metal and next to cast a bigger mortar. [p 324]

Gun-making then proceeded apace, and when H. Dufton visited the country in 1962-63 he found that the Europeans "produced a small mortar, which, considering the manner in

which it was made, was a marvel. The metal was melted in some thirty crucibles, on fires in the ground, blown by hand-bellows."

"Téwodros made extensive use of missionary craftsmen -- because he had scarcely any other source of skilled manpower. -- The ruler later, in January 1864, sent Flad to England, in an unsuccessful attempt to engage gun-smiths and other artisans."

"In 1863 Moritz Hall and the missionaries cast a large mortar which, however, -- only whetted the royal appetite for more. -- Waldmeier, whose relations with the monarch had then seriously deteriorated, records, with venom, that toward the end of the year /1866/ the latter 'ordered us to cast a mortar from which a 1,000 pound cannon-ball could be fired. -- The king wanted to put us all in chains and throw us into prison, but because we were busy making this great gun he was prevented from doing us harm --' The making of guns strained the Emperor's resources to the utmost."

[Pankhurst 1992 p 325]

"Brass was collected -- from all parts of the country to be melted down, together with 30 vases from Mäqdäla, after which the Negus manufactured a cannon, which they called *Bomba* -- later christened Sebastopol after the famous battle in the Crimean war -- is said to have weighed seven tons, and required as many as 500 people -- to pull it uphill." /As the mortar still exists on Mekdela, its data can be researched with accuracy./ The transport of the mortar from Gafat to Mekdela also initiated a remarkable project of road building by Tewodros. Clements Markham later reported from Mekdela that there were, among other arms, nine brass mortars, all made in Ethiopia and some with inscriptions in Amharic.

[Pankhurst 1992 p 326]

2001 Going to the hamlet of Gafat, a few kilometres outside of Debre Tabor, involves driving to the east, finding someone to be guide, going off the main road along a dirt track for two kilometres, and walking the final kilometre over farmers' fields.

"The missionaries were held at Gafat, and you can still see the foundations and walls of the buildings they used as foundries. Young children tried to sell us pieces of rock which were supposed to be leftover iron from the many unsuccessful castings of cannons, but they look more like the regular porous heavy rocks of the area than metal castings."

"The story of the missionaries is well known in Gafat, and we quickly found a relatively young farmer who was well informed. Apart from taking us to the recognizable stone walls which he called the foundries, he was able to point out the hill on which he said the missionaries resided. Across the way is another hill, on which he says the soldiers guarding the missionaries were camped. He also pointed out the direction from which the Emperor Tewodros rode in about 5 kilometers over the hills to inspect the progress -- a daily occurrence when the Emperor was not away fighting -- There is not much left, which is unsurprising given that the events occurred over 130 years ago, but there is more physical evidence of the reign of Tewodros here than in Debre Tabor itself. -- Gafat, with its small stone walls, had a greater feel for the period of Tewodros for me than anything in the town."

[John Graham in AddisTribune 2001/10/26]

JEH45	Galeie (Galeic) (waterhole) L.M. Nesbitt had one of his camps there. "In the evening -- I had a delightful swim in the pool, for the water-skins had all been filled. The water was unusually cool, for the pool	12/41	[Ne WO]

lay deep in the narrow ravine where the direct sunlight reached it only for a short time each day. The pool itself was also deep. Above it, the overhanging walls showed the colourings of metallic compounds, and great caves showed in them here and there. Some of these last had been used as dens by wild animals, for they contained complete skeletons. But they must have been driven there by storms, or some other natural disturbance, for although there was water there was no food, either for vegetarian or for carnivorous animals." [Nesbitt 1934(1955)]

HDE76	Galeti (Galletti)	08/39	[WO x]
JDH05	Galeti (Galletti) (river & valley) West-east valley in the Chercher area with affluents Kunni and Rochelle. There are Pre-Cambrian rocks in all three of them. Iron ore occurs in haematite and magnetite. The magnetite in turn occurs in green schist. A crystalline white to brown rock (mainly dolomite, similar to marble) at the confluence of the Kunni and Galeti rivers contains a high percentage of magnesium carbonate. Altitude about 1430 m. Occurrence of copper with nickel and cobalt has been indicated. Minerals are azurite, malachite, erythrite, and cobaltian. Malachite occurs in green sandstone. It is not extensive but forms lenses whose maximum length is 10 m and minimum thickness a few decimetres. Before 1965, one gallery 150 m and four smaller galleries were dug in order to determine the distribution of the malachite-rich sandstone layer. [Mineral 1966]	09/41	[+ Mi]

	"We were glad to leave Gallifaghe, in accordance with the permission granted by the Sultan, for the ground about our camp was in a disgusting state, owing to the remains of slaughtered animals which lay everywhere. The accumulation of rotting refuse had been contributed to by the concourse of natives, who had gathered to our camp from every side. By day the carrion birds floated through the tainted air, or fought together on the ground about us, without cease; and at night hyenas and jackals contended with dogs, raising such a pandemonium of yelling, howling, and barking as rendered sleep utterly impossible. - The next morning we loaded early and moved away. We first crossed the remainder of the desert plain, and then came amongst low volcanic hills, where the hot air was stagnant and lifeless." [Nesbitt 1934(1955)]
