

??	Leado (Le'ado)	09/40	[18]
	Small lake near the left bank of the Awash. Lieutenant William Barker passed there in late January 1842 on his way to the coast. [R Burton, First footsteps .. (1894)1987 appendix V p 228]		
JEB41	Leadu (area)	11/40	[WO 20]
	A site west of Mille. Maurice Taieb and his guide Ali Axinum had found fossils of animals there in 1971. A wide area was surveyed in March-April 1972 with Kelati Abraham from Asmara as assistant. The Leadu site itself was less than a square kilometre in size. The hope to find hominid fossils was not fulfilled yet. The thick plateau surface of quartzite and volcanic rocks had the gravels coated with "desert varnish" and in this surface there were found Acheulean handaxes and cleavers. [Kalb 2001 p 47-48, 55-56]

HCE..	Lega Dembi (Laga D., Legadembi) (with gold mine) 350 km south of Addis Abeba, see also Shakiso The runway /named Shakiso/ serving the gold mine was constructed in 1947 under the direction of Lars Knabe, a Swedish building engineer employed at the Air Force. In 1950 N.H. Doorninck made a sketch map of Lega Dembi valley in scale 1:10,000. According to him the following rocks have been found: diorite, gabbro, pyroxenites, and peridotites. Kaolin deposits are known to exist in the environment. A gold placer has been exploited in handwork operation (photo on page 368 of the book cited here). It is stated that 220 pits wer dug. [Mineral 1966] The Emperor visited the gold mine on 16 March 1968, and it was called Shakiso in the press. [News] A feasibility study for development of the Lega Dembi gold mine was mentioned in July 1986. In December 1987 the European Investment Bank agreed to lend ECU 21 million to develop the Lega Dembi open-cast gold mine and construct an ore processing plant. The scheme would create 650 jobs. It was estimated that 32 tonnes of gold would be possible to recover from the ore reserves. The processing was planned to start in 1990. February 1988: "The UK's Davy McKee has started work on a two-year service contract to set up the country's first commercial-scale, non-alluvial gold treatment plant. -- The	05/39	[Mi n]

plant will have a capacity to process 3,000 tons a day of ore; it will include a tailings dam and workshops. Gold will be recovered by crushing, grinding, cyanide leaching and carbon-in-pulp methods. -- The unit - to be built near Shakiso in the Adola gold field - is part of the Lega Dembi mine's overall development plan."

[News]

The treatment plant was opened in 1991. The Lega Dembi mine was producing about 3 tons of gold per year by 1995, and it was the only gold production in Ethiopia working in the form of a mine.

Lega Dembi was privatised in 1997 in a deal worth around US\$ 172 million. The government estimate of the total resource is 60-200 tons of gold.

After privatisation Lega Dembi was operated by Midroc Gold, owned by the Saudi-Ethiopian businessman Sheikh Mohamed Al Amoudi. In July 1997 it was published that an offer to take over from Al Amoudi at US\$ 175 million would be preferred to another offer from a South African bidder.

 Lege Batu is a village situated 84 km west of Addis Abeba on the main road to Gimbi. The land around this village was in the early 1900s Imperial domain. The peasants' production was used to supply the Imperial palace in the capital with foodstuffs. Later on Empress Menen received it as her personal property. When she died her children - Princess Tenagne Werk, Prince Makonnen, Prince Sahle Selassie - inherited it. They in turn granted some part of the land to servants while their own children inherited other parts.
 A study of ten peasant families living in a continuous area comprising 91 hectares was made in 1970. All ten farmers were tenants cultivating the land of three absentee owners. Some years before 1970 the owners had abandoned the share-cropping system in favour of payment of a fixed amount or grain or money from the tenants. This system was called 'contract' among the farmers. According to Mulugeta Tesemma (see below under "text") the fixed amount of grain to be paid was in 1971 a somewhat better deal for the farmers than 1/3 of the harvest would have been.
 The three owners were not personally present in Lege Batu. Their interests were handled by a local representative, who collected the rent. According to the representative a tenant may stay in the area as a farmer as long as he is hard working and pays the rent on time. If he is careless and not obedient enough, he can be evicted.
 In addition to the rent, the tenants paid an agricultural income tax to the Government. This tax varied between Eth\$ 1.50 and 6.00. The owners paid tax, too, but a negligible amount in relation to their incomes. One owner occurring in the study paid Eth\$ 90 in tax while in the same year collecting 4.500 kg of grain as rent, equivalent in market prices to about Eth\$ 1.000.

Lege Dadi, to the south there is a stream of the same name.

A dam for the Municipality, at 32 km from Addis Abeba along the Dessie road, was started in November 1967 and the major work was done from June 1968 to July 1969. The Senate approved a loan of Eth\$ 25 million from *Istituto di credito italiano* on 11 August 1967. The Emperor laid the foundation stone on 23 April 1968.

The Sendafa river starts 60 km north of the dam and combines all streams from the surrounding mountains. The Municipality obtained a loan from Italy for the project. Contractor was the firm Salini. The project is a 40 m high and 450 m long gravity dam. On 25 August 1969, when the project was about 80% completed, they started preliminary water storing, as the purpose of the dam was securing water supply for Addis Abeba. [Eth. Herald 1969-08-24]

The Lege Korma gold placer is situated at an affluent of the Dilla in the Karakore region
in Wellega. The deposit is located in quartzites containing white quartz, amphiboles, and
pyrite. The gold content is lower than in Tulu Bollo and Lege Brokis.
[Mineral 1966]
- ?? **Lege Shoni** (Laga S.) (in Wellega) ../.. [+ Mi]
Lege Shoni valley is a left tributary of Aragalfi brook, which in turn is a left affluent of
the Didessa in western Wellega.
An outcrop of Pre-Cambrian rocks in this locality is composed of amphibolites,
amphibole gneiss, and granite with pegmatites. Forty-five metres of marly grey
sandstones with transition to the sandy marls have been deposited in this rock complex.
These sediments are superposed by quartz sandstones with accessory pyrite.
The sandy clays have been sedimented with intercalations of the coal to a total thickness
of 16 m. The coal formation is covered by crystalline marly limestones and by green
sandstones 50 m thick. Finally, the sandy clays and tuffic sands have been sedimented 30
m thick. Volcanics of the Trap series comprise the sediments composed of kaolinized
tuffs. They contain pieces of basalt and small intercalations of volcanic glass about 25 m
thick.
The coal formation contains seven seams of coal with depths varying between 15 and 45
cm.

??	Lemu Chemari , in Arsi Lemu Chemari is considered to be the second best cooperative of SEAD (South Eastern Agricultural Development Zone). Practically all household heads in the village are members. A few old and handicapped people are not allowed to enter but receive support from the community. The village climbs the slopes on both sides of the trunk road south from Asela. The houses are square and spacious, with roofs of corrugated iron sheets and they are all equipped with electric light from the main line along the road. The 329 member households share 1,300 hectares of land. Each family has 1,000 square metres around the house where vegetables are grown. They also keep 2-3 cows, fed on the communal grazing land. SEAD has introduced the piece rate system on a trial basis in this cooperative. Before, each member got workpoints according to hours worked and type of job. Now the fields are divided between the members. They cultivate the plot on a contract basis, using the cooperative's oxen, but in their own individual way. They are allowed to keep all yield above 20 quintals per hectare for themselves (the harvest has risen to 32 quintals). "But the individual concept has grown stronger", says Ato Degafe Abebe, secretary of the cooperative. "Now the farmers want to work day and night on their contract plots and it is very difficult to convince them to cooperate in communal work like school building, road maintenance etc." Female heads of household are also members of the cooperative. Female cultivators take care of 16 hectares of irrigated vegetable fields. Some women have received training in weaving and now run a handicraft workshop and some others make soap from oil residues. geol	At Let Marefiya, a soda-rich pantellerite occurs, and there is an interesting report from this locality of hypersthene basalt associated with hyalobasaltic tuffs.		

[Mohr, Geology 1961 p 130]

Menilek granted this place to the expedition of the Italian Geographical Society under Orazio Antinori in December 1876, two months after they had reached Ankober.

A station under Antinori was founded in January 1877, on land that had been available already to Mons. Massaia, because Menilek had not kept his promise to arrange a special site for the station. The general geographical intention was to explore the Equatorial lakes, but in a sense it was also the first colonial undertaking of the Italians in East Africa.

[Guida 1938]

The journalist and traveller Sebastiano Bernardo Martini and Antonio Cecchi with a caravan of 120 camels departed on 15 March from Zeila, arrived to Shewa in September and met Antinori and Giovanni Chiarini on 30 September 1877. Antinori had suffered an accident when a gun went off by accident, and his hand was so damaged that he could not use it. Martini returned to the coast in October. He then transported the collections of Antinori and carried a request for arms for Menilek.

[G Puglisi, Chi è? ..., Asmara 1952]

In the beginning of the journey from the coast Cecchi had three white servants with him, but they returned when they realised how difficult and dangerous the caravan journey would be.

When Antonelli and Antonio Cecchi returned to Let Marefiya on 6 March 1880, after a difficult journey of 26 months towards the south-west, he found that the Italian station had been much developed in the meantime. Antinori had initiated and supervised this transformation of 95 hectares of land during four years. Antonelli and Antinori made long expeditions in Shewa together.

[A Ribera, Vita di Antonio Cacchi, Firenze 1940 p 70-82, 134-135]

Cecchi left Let Marefiya on 3 August 1881 with a caravan of men and camels supplied by Menilek. He was to return to Italy but had to wait for two months at the watercourses impossible to pass during the rainy season. In the meantime he heard that the expedition of Giulietti, intended to open the way from Assab to Shewa, had been massacred.

[Ribera p 136]

Antinori died at Let Marefiya on 26 August 1882. His tomb was made in the shape of a hut with a cross at the top, at some hundred steps from the station.

[Guida 1938]

There was an Italian traveller and surgeon Raffaele Alfieri (born about 1840-42) who stayed in various places in Africa, among them Debre Markos. He was taken prisoner by Menilek's forces on 15 June 1882 and came to the court of Menilek in time to make the coffin for Antinori. Alfieri stayed for six years in the service of Menilek. He returned to Italy in 1888 but never wrote anything about his adventures.

[Puglisi 1952]

The medical officer Vincenzo Ragazzi arrived together with Antonelli in 1884. Later he succeeded Antonelli as director of Let Marefiya and worked together with doctor Leopoldo Traversi (b 1856).

Ragazzi was not as interested in political questions as Antonelli but was foremost a scientist. He accompanied Menilek's military expedition to Harar 1886-87 and made geographical surveys. He sent many samples of animals and plants to Italy in 1886. In October 1887 he was sent on Menilek's behalf to Italy and returned to Shewa half a year later.

Luigi Capucci and Emilio Dulio arrived to Let Marefiya 12 November 1885 after having travelled from Assab. They had nearly been stopped by the Sultan of Awsa. Their companion Luigi Cicognani had to stay behind with the goods they were supposed to bring to Ethiopia. Cicognani finally got all the goods spoiled and did not reach Menilek's camp at Boru Meda until 3 March 1886.

Emilio Dulio returned to Let Marefiya in mid-December 1886 after having spent half a year in the Jimma region. He then returned to Italy, where he published about slavery in 1887.

[G Puglisi, Chi è? ..., Asmara 1952]

By mid-1889 a grave animal typhus epidemic was raging in Shewa. At Let Marefiya one-third of the population died, and only one cow survived.

[Marcus, Menelik II, p 135]

Huts of engineer Chiarini were at 15 minutes walk form the station.

1890s Count Augusto Salimbeni around October-November 1890 recovered from an illness during a two-week stay with Dr Traversi at Let Marefiya where, "with its prosperous farm gardens, he found a pastoral heaven. He was enchanted with Dr Traversi's little girl --" As a kind of diplomat, Salimbeni sent coded dispatches (at least one of 12 November) to Italy.

[C Prouty, Empress Taytu ..., 1986 p 86-87]

On 16 February 1893 Traversi informed Menilek of his arrival at Let Marefiya. He had been instructed to attempt to regulate Italian relations with Ethiopia.

[Marcus p 145]

Traversi was the last/?/ Italian director of Let Marefiya station, and like other Italians he had to leave Ethiopia because of the war 1895-96. Together with Colonel Piano he returned to Italy in 1894.

Engineer Capucci remained, was accused of espionage and sentenced to death but pardoned. Let Marefiya as an Italian station was completely abandoned in 1895.
