geol	Psammitic schists and sandstones are abundant at Yabelo. The town is at one corner of the triangle Negele-Dilla-Yabelo inside which the gold-bearing area of Sidamo is situated. At Fulli mountain near Yabelo there is syenite, the occurrences of which are sparse in Ethiopia. [Mineral 1966] In the northern town, at the end of a narrow deep valley, there is a famous spring Garbi Yabelo named from a huge acacia, <i>garbi</i> (O). The Italians lined the source with concrete and constructed reservoirs, but they were not maintained later. Another famous spring Kobole is located to the south-west.		
1930s	The town was entered by the Italians (Div. Laghi) on 11 July 1936 and /more formally occupied?/ on 6 August 1936 under the command of Giorgio Pollera. Post office of the Italians was opened 26 February 1937. Its cancellations read IAVELLO*GALLA E SIDAMA.		

- 1940s Before the Allied attack on Mega on 20 February 1941, 15 Italian tanks from Yabelo moved southward, but they failed to break through the South African forces holding the road blockade which had been established in advance.
Yabelo was captured by the Allied forces on 22 February 1941.
[R N Thompson, *Liberation ..*, 1987 p 107, 176]
The first bombing by the Allies of Italian-held targets in Yabelo was on 16 June 1940.
[E Rosenthal, *The fall ..*]
- 1950s The Norwegian Lutheran Mission station was started in 1950. At the first year of their school they had 34 children from seven different tribes. A course for evangelists was opened in 1952, with Omund Birkeland as teacher. By 1953 they Norwegians also went out to 20 villages in the surroundings.
[S Hunnestad 1973]
The Italians had built a hangar at Yabelo. In 1952 it was dismantled and transported to Bishoftu (see Debre Zeyt) in air loads of 3 tonnes each, usually twice a day. It was re-erected at Harar Meda to house the newly acquired Fairey Firefly airplanes from Canada.
[Svenska vingar .., Sthlm 1999 p 66]
Ommund & Eli Margretha Lindtjørn were partly in Yabelo in 1949 but also in Dilla, and a little later Kristi Osvik. Norwegian missionary nurse Malena Bjelland (b 1925) arrived in 1954. In that year, in May, the contract for a site of the NLM mission was finally signed - after they had worked there for four years.
Amare Mamo as a young man was teacher for a while at the Norwegian mission in Yabelo in the early 1950s. He later became important for production of publications from the mission.
[S Hunnestad 1969 p 74]
On 29 December 1957 the Norwegians had baptising of three persons. They had no church and used two classrooms for meetings.
Yabelo was centre of Arero awraja (-1956-1980-) and its Sub-province Governor in 1959 was Fitawrari Geneme Bedanei.
- 1960s Torbjørn (b 1928) & nurse Åslaug (b 1931) Torgersen arrived to the NLM in 1962. The Yabelo clinic of the Norwegian mission (-1955-) had many patients in the late 1960s, partly because of unrest and guerrilla war in the region. In one year, around 1968, about 10,000 patients were treated.
[S Hunnestad 1969 p 151]
Population 3,022 as counted in 1967.
The primary school in 1968 had 180 boys and 64 girls, with 8 teachers.
The Norwegian Mission primary school had 120 boys and 45 girls, with 7 male Ethiopian teachers and one female foreign teacher.
The junior secondary school had 64 male and 10 female students in grades 7-8, with 5 teachers (Ethiopian).
- 1970s Around 1970 German aid money was used to hire an Israeli construction firm for road work from Dilla to Yabelo.
Arriving to the Norwegian mission in 1970 were Gunnar (b 1943) & Åshild (b 1946) Oseng, and Åshild was educated as a teacher.
Burji and Konso people lived in an near Yabelo town, and in the plains were the Borana with their cattle. Culture and religion in the town were influenced by the comparatively few Amhara and Somali, but the most commonly spoken language was that of Oromo.
In the early 1970s the Norwegian mission clinic had about 10,000 outpatients and 150 in-patients annually, and they often treated fugitives from the unrest in the area. The clinic had two buildings, one with four rooms for most of the activities and one small building for in-patients, Kristi Osvik was a pioneer at the clinic in Yabelo.
[S Hunnestad, *Nærkamp ,,*, Oslo 1973 p 46-67
and S Hunnestad, *Ved åpne grenser*, Oslo 1974 p 100-101]
Marta Gabre-Tsadik, the first female member of parliament in Ethiopia, fled southwards out of the country in September 1975. Her group, travelling with a Landrover, succeeded to pass Yabelo in the night by making the car roll a sufficient distance with its engine

turned off. On the far side there was a store of the Highway Authority with many parked cars, but even there they were not stopped so they could turn on the engine and continue towards Kenya.

[Marta Gabre, (1983) Swedish ed. 1985 p 145-147]

In 1977 guerrilla forces of the SALF attacked Yabelo and other towns, but had yet to enter a major centre in Sidamo.

[Markakis 1987 p 228]

There was a petrol filling station of Agip (-1978-).

1980s The Lutheran World Federation contributed to construction in 1983 of a hostel for secondary school students.

Population about 6,000 in 1984.

The Norwegian missionary and agronomist Kettil Fugelstad worked there around 1985 and was active with tree planting.

1990s Danish tourist Hjalte Tin with wife Nina, son Emil and daughter Ida on three motorcycles passed Yabelo in October 1992. They could stay with CARE in two of their guest rooms. CARE was distributing food to 160,000 of the 190,000 people in the area, at 14 distribution points. Flour and oil were handed out, as far as possible on the same weekday at all points, to prevent the same people to fetch from more than one place. There happened to be plenty of petrol available at Yabelo, so the Danes could get for their motorcycles without previously obtaining the permit which was officially required. There was some violent rain, but as Yabelo is situated on a slope the water could drain off fairly quickly. The Danes were informed by one Claudia working for CARE. She had lived there for a couple of years and written a thesis about the Borana people, and the Gabra in Kenya and southern Ethiopia. There were some Gabra near Yabelo still in the late 1980s.

"When the drought was at its worst, the Borana people decided to chase away all Gabra. -- The Gabra were killed, their livestock was stolen, and the last surviving Gabra were moved away on trucks by CARE."

"Claudia serves more tea and says that the Protestant and Catholic missions have tough times here. In twenty years the Evangelical mission station has not succeeded in converting and baptising more than a handful of Borana. Just to find a novice who wants to become a priest and does not already have two wives, has been very difficult. The Catholic mission station, on the other hand, does not trouble itself with redeeming souls, instead they operate a school and a hospital with very good results."

"A wife costs four cows. A young man who wishes to marry must either work during four years for the father of the girl or else steal the four animals. To steal cows for the bride purchase is quite accepted."

[Rasmussen & Tin, Fra Cape til Cairo, Copenhagen 1994 p 162-168]

Population about 10,300 in 1994.

Worth a look are the "singing wells" at the nearby village of Dublock. These wells have a 50 m long entrance and are 30 m deep. They are referred to as singing wells because the Borena people traditionally sing while they haul buckets of water to the surface.

[Bradt 1995(1998) p 224]

2000s Tourist information: Yabelo lies around halfway between Dilla and Moyale, about 4 km off the main road (bus passengers may be dropped at the junction).

The market is on Saturday.

One of the best hotels is Hoteela Waggaa Haaraa. "Electricity is very erratic in Yabelo." One bus leaves daily for Moyale. Only trucks run to Konso.

[Lonely planet 2000 p 226]

Population about 12,700 in 2001.

A modern hotel was about to be completed in 2002.

Yabelo is the centre of many of the aid programmes for the Borena region, among which CARE was still there. In 1999-2000, Borena was in the grip of a fierce drought, with drastic consequences for these pastoral people. The Borena are mainly cattle keepers, and cattle are most vulnerable to drought. In many areas, 80-90% of the cattle had died. One

unfortunate impact of the drought was also to increase the tension over water and grazing areas between the Borena Oromo and the Guri Somali. There could be some insecurity even for travellers on the main roads.

[John Graham in AddisTribune 2000/08/18]

Yabelo : Borena

Near the village of Borena, 6 km outside Yabelo, there are some small cave paintings. Among the animals depicted are giraffe, hyaenas, lions and ostriches. It is a one-hour walk to the caves from Borena.

[Lonely planet 2000 p 227]

HBS46 Yabelo sub-district? (-1997-) 04/38 [n]

HBS46 Yabelo wereda (-2000-) 04/38 [20]

HBS.. **Yabelo Wildlife Sanctuary** 04/38 [20]

Size 2,496 sq km. Established to protect the Swayne's hartebeest and endemic birds such as the Stresemann's bushcrow and the white-tailed swallow /first described to Western biologists in the 1930s and 1940s respectively/. 20 species of larger mammals and 194 species of birds have been recorded.

Recent sightings in the juniper forest of the sanctuary of Prince Ruspoli's turaco suggests that this elusive endemic bird may not be as near extinction as feared.

The park is made up of acacia woodland and savanna grass as well as some juniper forest. Accommodation is in Yabelo.

[Lonely planet 2000 p 42, 60, 227]

The game sanctuary lies a short distance east of the main Moyale road.. A small number of Swayne's hartebeest are present, as are other savannah species such as Burchell's zebra, greater and lesser kudu, Grant's gazelle and a variety of small predators.

The rare turaco bird was collected by Prince Ruspoli in 1890, but the prince died without making a record of *where* it had been found. The habitat of Prince Ruspoli's turaco remained a mystery until the 1940s, when a second specimen was collected near Yabelo. Only in 1990, precisely 100 years after the initial specimen was collected, was it established that a healthy breeding population existed.

JDP..	Yangudi Rassa National Park	10/41	[Ca 20]
	Size 4,731 sq km. Established to protect the African wild ass. Semi-desert habitat. 36 species of larger mammals and 136 species of birds have been recorded. The park is in a contentious area and has not been developed. Accommodation is in Gewane. There is probably less wildlife here than in any other national park in Ethiopia. The road through it is interesting, however, and goes through Afar country. The land is very flat, and the road very straight (something like the American Midwest). [Lonely planet 2000 p 42, 291-292] The park is bisected by the Gewane-Mille road. This area is home to the last remaining herd of African wild ass, ancestor of the domestic donkey. Although there is a chance of seeing wild asses from the main road, you are far more likely to see populations of domestic donkeys and the two are difficult to tell apart. [Bradt 1995(1998) p 185] Travel north from Gewane for about 60 km, where the park is situated to the east of the Assab road. There is no specific entrance point or park headquarters. Tracks within the park are passable to certain distances. There are no facilities in the park, but camping is allowed anywhere. Malaria can be severe in the area, and full precautions must be taken. - HE... Yebrage Hawariat, village in Gojjam/. [x]
Communal ownership of land in the village is described by a student:
"The land holding system of Yebrage is traditional: characterized as belonging to all the descendants of the ancestors known as *Akni Abats*. A few hundred years ago the first leading settler called *Konez* established a church, today known as Hawariat. He occupied the area in the name of the church. -- In the course of time -- the land was divided into eight Akni Abats. -- Later, the recognized children of the eight Akni Abats, known as *Menzer Abats*, subdivided the land among themselves. The principle of father to child inheritance resulted in uncontrollable measure of parcellation and fragmentation. -- Apparently the lands of Yebrage are registered as Church land and as Government land. But they have only *Gult* rights. Both of them don't have the right to confiscate or to use the land. So the absolute ownership of land rests in the hands of the settlers. They use the land communally and because of this there is strong attachment to the land."

A right tributary of the Abay, in Gojjam. It joins the Abay a little downstream of where Castanio started to build a bridge in 1900.
"On May 13th /1930/ we -- dropped down into the valley of the Yeda River. The track was overgrown and difficult to find, and there were steep zigzagging descents of loose pebbles, so that we had to walk most of the way. When we reached the bottom of the

slope the going was more level, and although the track now disappeared altogether we kept on down the valley, through scrub forest with occasional patches of cotton cultivated by people who live far away on the distant hills. As we approached the last descent to the Abbai ravine we came upon the first evidence of the proximity of the bridge, when we passed a deserted quarry with heaps of shaped and squared rocks standing there just as the masons had left them thirty years before. The next sign of civilisation was the telephone wire, which was propped on branches of trees and rocks where the lichen-covered poles were missing, and had no insulators even where there were poles. I had always been under the impression that no wire would convey a message unless all places of contact were properly insulated, so out of curiosity, on my return to Zemmi where there was a telephone office, I determined to test this line and sent a message by it to the British Legation at Addis Ababa. Much to my surprise, the reply was handed to me the next day." [Cheesman 1936 p 301-302]

Speakers of proto-Ethio-Semitic established monarchies in the first few centuries B.C. as known from such sites as Yeha.

[D N Levine]

The Portuguese journey described by Alvares passed Yeha about 1 August 1520.

He writes Abafazem which refers to the mountain Abba Aftse.

Abba Aftsé was one of the Nine Saints who arrived about 480. He went to Yeha and transformed the Sabeian temple there into a Christian church.

In December 1769 James Bruce with his expedition passed Yeha on their way to Gondar. Although Bruce had studied archaeological remains very much in other countries, he does not seem to have noticed the temple in Yeha - or did he omit to write about it?

[M Bredin, The pale Abyssinian, London (2000)2001 p 85]

After the battle of Gundet, learning that the Egyptians were again invading the highlands, Yohannes IV returned to Adwa. He summoned Dejzasmach Welde Mikael to his camp at Yeha. Instead of obeying orders, Welde Mikael went over to the enemy.

[Rubenson 1976 p 327]

Linguists who have studied inscriptions assume the presence of actual Sabaeans in Ethiopia at Yeha.

Theodore Bent and his wife in early 1893 made a two-day visit to Yeha from Adwa while waiting for permission to enter Aksum.

"It is a ride of about five hours from Adoua to Yeha, and part of the road is very difficult - - The first object of interest which we passed was a big sycamore tree, about a quarter of a mile out of the town, where executions usually take place -- To our left we passed the church of St. Michael, built a few years ago by Ras Michael -- A stream runs through this valley, the Mai Veless /May Beles?/, and the soil looks extremely fertile -- Ruined villages are seen in all directions --"

"The first sight of Yeha impressed us exceedingly -- The priests of the monastery were somewhat jealous of the close scrutiny to which we submitted the ruins; but, on receipt of a few dollars, they showed us everything -- one widow woman who had three inscriptions built into her house most reluctantly allowed us to take squeezes, gradually working herself up into hysterics -- /the stones of the ruin walls/ are all 'drafted stones' - that is to say a carefully chiselled line edging each stone. -- In front of the vestibule stood two rough monoliths, at the base of one of which is an altar with a circular disk on it -- about three hundred yards from the temple on the other side of the village stood a building, only a few stones of which are *in situ*, and these are of colossal size."

The ancient name Ava (Awa) read on inscriptions is "doubtless connected with the Sabaeian worship of Baal-Ava -- the Sabaeian tibe which had Ava for a capital were known by the Greeks as people who took refuge in caves."

[J T Bent, The sacred city .., London 1893 p 134-148 with sketches and a photo]

Comments on inscriptions, by Professor D.H. Müller of the University of Vienna:

The inscriptions found by Mr Bent do not provide us with the name of any king or any date by which the age could be decided. Bent could not copy more than one inscription having *two* lines and as expected this was in the *boustrophedon* style with the first line written from right to left, the next one reversed, and so on, as the inscriptions of the oldest Sabeian period used to be. The oldest letters of the Sabeian script are found.

[Bent 1893 p 231-236 with facsimiles of inscriptions]

The temple at Yeha is finely cut of local material, more recently described as silicified sandstone. It is Ethiopia's oldest surviving building.

Inscriptions written using the epigraphic south Arabian script derive from sources that were related, but not the same. One group wrote in pure Sabeian, the other in a variant 'proto-Ge'ez' language. There seems to have been a mixture of genuine Sabeians with a local Ethiopian people. The kingdom of D'MT (Di'amat?) vanishes from the record by perhaps the third century B.C., and nothing more is known of its history. It seems probable that the settlement at Yeha represented a major centre of the kingdom of Di'amat, dating from at least the fourth or fifth century B.C. to perhaps a few centuries later. Thus is good possibility that Yeha might have been the central place, the capital. The buildings at Yeha were first noted by Europeans when Francisco Alvares visited the site in the 1520s. The chronicle of Sertse Dengel mentions that the king camped at Yeha in 1578 on his way to defeat the *Bahrnagash* Yeshaq.

James Bruce passed in 1769, traversing the plain with the village to the south-east and apparently not noticing the temple. Henry Salt admired it in 1810. J. Theodore Bent visited Yeha with his wife in 1893 and in the same year published a good description of the ruins of the temple.

The Deutsche Aksum-Expedition visited Yeha in 1906 and surveyed the buildings, and their plans and elevations were published in 1913. DAE also took numerous photographs. [S Munro-Hay 2002 p 350-355]

An old village church seems to have been demolished for a new one about 1943.

There is a huge amount of terracing in the area, some of it of old date.

Near the ancient temple ruin is the present-day Orthodox church of Abba Afse, named after one of the Nine Saints. It has been replaced as recently as about 1951, so the church photographed by David Buxton and published in 1949 in 'Travels in Ethiopia' is not the same one.

The ancient temple is extremely well preserved, with up to fifty-two courses of masonry. It is strange that the site near to it has not yet been thoroughly excavated by archaeologists. The structure is intended to have two floors? Jean Dorese worked there briefly in the 1950s. He cleared a baptistery, very similar to others found in ancient Ethiopian churches, with flights of steps leading down into the basin from east and west. The remains of an old church inside the temple was there when the DAE made their survey but was later cleared away.

Some 300 m away from the temple are giant square stone pillars now known as Grat Be'al Guebri. Excavations there were made by M. Anfray and briefly described in a report published in 1972.

Tombs dug into the rock below the temple to the south-east and south-west have been excavated and interesting objects have been found.

[S Munro-Hay 2002 p 356-359]

Objects of everyday use, recovered in recent years by excavation, tell a good deal about this early civilization. They include some finely made pottery of very varied forms, several lamps and a variety of bronze tools and weapons including spears, daggers, axes, chisels and sickles. There are also the curious 'identity marks' which seem to have served as personal seals or monograms: their impressions have been found on pottery and they could have been used as brands for marking livestock. No two are alike and they consist of open-work geometrical or animal designs often incorporating a few characters of the alphabet - presumably abbreviations of the owner's name.

[D Buxton, *The Abyssinians*, London 1970 p 36-37 with pictures of 'marks']

Alvares described the temple at Yeha "as a very large and handsome tower -- surrounded

by good houses, with good walls and flat roofs above --"

"The 'good houses', walls and terraces have long since disappeared, but other remains of the old town can still be seen. -- Several long stone blocks each some ten centimetres wide bearing inscriptions in Sabean, almost certainly also taken from the original temple, are likewise preserved --"

In the late 400s arrived the Nine Saints, a group of Greek-speaking missionaries. Among them was Abba Asfé, who found a monastery at Yeha.

[R Pankhurst, *The Ethiopians*, 1998 p 21, 37]

1990s

The ruined city of Yeha must once have been among the most important in Tigray. It is at least 2,700 years old, and was until recently considered to have predated Aksum, but fresh diggings outside of Aksum suggest the two cities existed contemporaneously. The relationship between Aksum and Yeha is little understood. Rock-hewn tombs similar to some at Aksum suggest that Yeha had its own dignitaries and rulers. It is a matter of conjecture whether Yeha and Aksum were independent political entities before the 2nd century B.C. or whether one town ruled over the other. What is clear is that by the time the Axumite Empire entered its most influential period, Yeha was of little political significance.

Yeha's single most remarkable antiquity is a well-preserved 12 metres high stone temple that is thought to be over 2,500 years old. The large statues of plump, dreadlocked women found at Yeha (now mostly housed in the National Museum in Addis Abeba) indicate a fertility cult of sorts, and the abundant engravings of ibex suggest this animal was of some religious significance. The excellent condition of the temple may be explained by the possibility that it was used as a church after Aksum converted to Christianity.

The turn-off to Yeha is 17 km past Adwa on the Inticho road, and marked by faded white signposts. Yeha lies 5 km north of the main road. There is a curator at the site, and a small entrance fee is charged.

[Bradt 1995(1998) p 306-307]

The ruins of this large temple consist of a single roofless oblong chamber 20 m x 15 m in size. The windowless ten-metre-high walls are built of smoothly polished stones, some of them more than three metres long, carefully placed one atop of the other without mortar.

Immediately beside the temple is a modern church dedicated to Abune Aftse. The building's front façade has been fitted with stones from the original temple, which are decorated with reliefs of ibex, with lowered horns. The church keeps many crosses, old manuscripts and stones bearing ancient Sabaean inscriptions, which can be seen on request.

[Camerapix 1995 p 105]

The inner measurements of the temple room are 18.50 x 15 m and the walls partly reach a height of 12 m. There are no ornaments on the walls. From inscriptions kept at the modern church can be deduced that the ancient temple was consecrated to the moon god Almaqah.

Traces of a large building exist to the north-west of the temple. Excavations there have so far found a gate and large stairs and the earliest example of Aksumite building method with stone and timber in combination.

[Äthiopien 1999 p 366-369 with plan of the walled-in area p 367]

The track heads off to the right of the foot of an immense basalt peak. After about 3 km the village of Yeha appears, dominated by the temple ruins. The track crosses a recently constructed bridge and leads into a very pretty village of stone houses, magnificently sited at the heart of a ring of mountains.

[Aubert 1999]

Yeha is little visited. Important rock-hewn tombs have been found in the vicinity.

[Lonely planet 2000 p 193]

As Dr Richard Pankhurst laments, the temple at Yeha is not so well preserved, and trees are beginning to grow through the walls. Dr Pankhurst has launched an effort to help the temple to be better taken care of.

Yēju, Yajju, Yejju, name of a Wello Oromo tribe and of a province settled by the Oromo in the 16th century; Yeju was incorporated into the province of Wello in 1942; as people numbering 66,364 (in the 1980s?)

- text J. Tubiana, Les combats rituels au Yedjou, *in* Comptes rendues sommaires
des séances de l'institut français d'anthropologie V, Paris 1951.
- HEM02 **Yeju** (Yejju, Yäjju, Fre: Yedjou) (historical name) 11/39 [n Pa]
(Yiju) (written Yadjow by the British in 1868)
This province was settled in the 1500s by the Oromo.
- 1700s Prince Bäkäffa, later emperor from 1721, fled to the Oromo when he was supposed to return as a prisoner on Mount Wähni. He sought hospitality with Amizo, the leader of the Yäjju Oromo.
Emperor Iyasu II had as his second wife a daughter of Amizo with the Oromo name

Wobit (Wabit), but she was called Bersabesh after she had been christened. Her son Iyo'as succeeded as still a child to the throne in 1755.

[Pankhurst 1997]

1800s Dejazmach Birru Aligaz was ruler of Jeju in the 1800s and rebel against Ras Ali. A letter of 21 August 1869 to Tewodros's son Alemayyehu in England says: "*Dejjach* Gobeze has now been named *Atse* Tekle Giyorgis. In June he fought with Faris Ali in Yeju, and Faris Ali died. -- all people hate him. He says, 'I am the king', and pillages the land as a *shifto*."

Asseggaheñ confirms in November 1869:

"Last year /by Eth.Cal./ King Tekle Giyorgis marched into Yeju and destroyed it."

Tekle Giyorgis himself also confirmed in letters to the British that he had killed Faris Ali.

1870s In a letter of 29 January 1873 from Yosef to d'Abbadie is written: "/the country/ including Yeju and Lasta is ruled by Ali Birru, the son of Faris Ali."

On 3 September 1874 the same writer says:

"A rebel called Zegeyye Birru controls Yeyyu and Lasta."

[Acta aethiopica III pages 23, 31, 43-44, 138, 171]

Emperor Yohannes marched to Yeju in January 1875, and its hereditary ruler Aba Wataw submitted.

[Zewde G Selassie 1977]

1940s Yeju was incorporated into the province of Wello in 1942.

In 1948, peasants rose after appeals against alienation of their land were ignored. Led by Kenyazmach Malaku Tayye and a certain Unda Muhammad, they attacked the prison in the district capital, Weldiya, and liberated the prisoners. The rebellion was finally suppressed with the help of the settler militia (*nach labash*), and the leaders were publicly flogged on a market-day.

1970s An uprising in 1970 was provoked by the encroachments of mechanized farming on pasture-land. The peasants managed to kill the leading beneficiary of that process, a member of the Yeju nobility named Kenyazmach Abate Haylu, before their uprising was quelled.

[Bahru Zewde, A history of modern Ethiopia 1991 p 218]

JEA92 **Yeju awraja** (Yiju ..) 11°45'/40°00' (-1960-1987-) 11/40 [Gz Ad x]
(centre at least in 1964-1980 = Weldiya)

The measures of land in this district were expressed in a special unit called *chika*. Its value could range between one and five gasha and was sub-divided in half *chika*, in quarter *chika*, and in *olenga*.

[Agriculture in Ethiopia, Rome (FAO) 1961 p 111]

Ato Yohannes Haile Selassie was appointed Governor on 31 October 1969.

The awraja is an elongated area of 4,175 sq km between 11°30' and 12°00'.

The western boundary is a mountain wall rising to over 3,500 m. The land drops to an altitude ranging from 1,000 to 600 m on the eastern boundary. The inhabitants still regard themselves as Oromo in the eastern part. To the west Christianity dominates and Amharic has replaced Oromo as the language spoken. Amharic is also spoken by most of the Muslims in the central parts of Yeju.

The inhabitants are sedentary farmers. Yeju has good rainfall, figures for the western part run as high as 1,600 mm. The population pressure by the 1970s was less pronounced than further north. Also the process of deforestation was of more recent date than in the north. The plain of Hara was still covered by dense forest around 1970, but five years later only the northern part of this area had some groves of trees left.

[K J Lundström, North-eastern Ethiopia .., Uppsala/Sweden 1976 p 16-17]

HDS22 **Yejube** (Iegiube, Yejibe) 10°09'/37°45' 2211 m 10/37 [Gz Gu Ad Ch]
(Yejubi, Yejubie) (visiting postman under Debre Markos)

- village with market south of Debre Markos
- 1800s A merchant village in Gojjam near the important market of Basso. In the early 1800s there were 17 'recognized brokers' for the slave trade, and it was claimed that 5,000 to 10,000 slaves passed through their hands annually.
[Abir 1968 p 59]
In the early 1840s there were a few hundred Muslim merchants and a small number of Christians. The recognised brokers, it was claimed, monopolised most of the trade in the Basso area.
[Journal of Ethiopian Studies III 1965 no 1 p 4-5]
Gustav Arén mentions Yejube as a big trading centre in connection with events in the 1890s.
- 1900s 1927: From Yejibe village a road passes through Basso, descends to the Abay at Yekatel ford, and thence climbs up to the Gudru highlands.
[Cheesman 1936]
- 1950s Population 960 as counted in 1956.
- 1960s The primary school in 1968 had 191 boys and 45 girls, with 6 teachers.
An elementary school building was constructed in 1962 Eth.Cal. (1969-70 Greg.Cal.), with Swedish assistance through ESBU.
