1920s	The agricultural farm was created in 1923 for Ras Teferi by the Italian Pastorelli, with fruit trees and tropical plants. There was also a village of local people with the same name and thermal springs with water +40° and cold springs with mineral water. Ras Teferi built a little hotel at the springs. [Guida 1938]		

(Sbacchi writes that it was in 1925 that Haile Selassie employed Arcangelo Pastorelli to improve the plantation.)

"Un vaste programme agricole, dont l'exécution a été confiée à un Ingénieur-Agronome Italien, Mr. Pastorelli, a été réalisé dans des conditions telles que les jardins d'Errer sont actuellement une mine de richesses agricoles.

A une altitude de 1.100 mètres, traversée par la rivière Errer, la station agricole d'Errer est au-jour'd'hui une entreprise florissante et exemplaire."

"Les premiers travaux ont été consacrés à l'assolement des terrains par la répartition des cultures et le creusement d'une canalisation de 2 m. de large sur 2.400 m. de long, avec dérivations secondaires, pour le drainage des eaux du fleuve."

"Des essais variés de culture ont été effectués dans ses plantations, dont les terres possèdent une qualité végétative excellente: arbres, arbustes *kapok*, dont une grande quantité est vendue annuellement - céréales, légumes, oranges, pêches, bananes, papayes, raisins, figes, mangues, olives, dattes, mandarines, noix, mûres, abricots, châtaignes, poires, melons, agaves, coeur-de-boeuf etc... tout vit et croît; le soya de Chine -- a fort bien réussi."

"Il a été aménagé des pépinières d'arbustes. Des arbres ont été importés de divers pays, de France, d'Italie, d'Amérique etc.

On y trouve plus de 90.000 essences diverses sur une étendue de 80 hectares."

"Les papayers produisent 100 Kgs. de fruits, les plants d'orangers s'élèvent à une hauteur de 3 m.50.

En 1929, il a été planté 200.000 arbres fruitiers: orangers et mandariniers, 60.000 plants de caféiers, et 100.000 pieds de vignes.

En outre, les plantations d'Errer possèdent des prairies de luzerne et autres plantes fourragères pour l'alimentation du bétail d'élevage."

[Zervos 1936 p 130]

1930s "Agronomic scouting missions in 1937 found that Haile Selassie's former estate was malarial, and Italian colonization was delayed because of land reclamation."

[Sbacchi 1997 p 108]

Around 1938 there were cultivated about 100 hectares, with irrigation. There were mainly fruit trees, of which 8000 of oranges, 4000 of mandarines and also lemons, bananas, coffee, wine, peaches, figs, dates, papayas.

The Italian *Direzione dell'Azienda* during the occupation used the former gibbi as office.

There were Italian plans to build a new hotel and a bath near the springs. [Guida 1938]

1950s A new building for the Imperial palace was completed in 1956, at some distance from the village. At that time there was one telephone, for the hotel.

JD...	<b>Erer Kimet</b> (Errer Kimiet)	09/42?	[+ x]
	Two sites with rock paintings in the Harar region. Mountain south of Kondudo. It is named for the Erer river between Harar and Kondudo, to distinguish from another Kimiet which also exists. There are two groups of damaged "rock paintings" which the Swedish traveller Björn von Rosen visited in the late 1940s. The eastern group has three types of paintings, probably from different times and not particularly well designed, with some animals. The other group some hundred metres to the west in a south-sloping precipice, is inside a rather inaccessible ravine. The paintings are white and crumbling from moisture. Small stone artefacts collected in the neighbourhood have provisionally been classified as from the Mesolithic period, which in Europe means 9000-5000 B.C. Scientists speak of "Somaliland Wilton" for the Horn of Africa region. [B von Rosen 1949 text p 224-226, 382-384]

- JDN83 Errefilibie (**Erifible**) 10°44'/40°13' 938 m 10/40 [WO Ne Gz]  
"-- we arrived at Erifible, a market-place lying in the centre of a vast amphitheatre of hills, on the slopes of which there were numerous huts. The actual market was situated in a sort of sloping stony field. The trunks of the trees scattered about in it were smooth and greasy, polished by tethering-ropes, and the rubbing of animals' bodies. The lower branches had been lopped off -- Stones arranged in circles of varying size, from a few inches to several feet in diameter, lay everywhere. These were the market-stalls, in which the merchants displayed their goods. At the lower end of the market-place a small torrent-bed, in which were some water-holes, ran through thickets."  
"To the right a line of euphorbias stood like a wall, and to the left acacias, mimosas, and thorn-bushes grew thicker and thicker, until the mass became merged in the dense forest which here clothed the mountain-side."  
"We had travelled from Borkenna without guides -- They had shunned the prospect of venturing amongst the hostile upland tribes. But in this country where water was abundant, and where peace reigned at present, guides were unnecessary. We now had to wait for the next market-day. These occurred twice a week. -- Some twenty-five miles to the north-west lay Batie -- Erifible was the most advanced Plateau market towards Danakil."  
"-- visitors began to arrive, including the chief of the village of Gore. -- More chiefs came to see us, and I was frequently asked to repair our guests' firearms. They had not the slightest aptitude for understanding mechanical things -- millet was being ground into flour for us in the adjacent villages."  
"The third day after our arrival was market-day -- a host of articles were displayed for sale - knives, lances, iron and brass bracelets, earthenware, horn trinkets, hide buckets, skin bags, tobacco, millet, and ground pepper /berberi/. -- Two caravans, each of some fifty camels, entirely laden with salt, arrived. -- The salt -- was stony and full of small holes, resembling petrified sponge. It was carried in long cylinders of woven palm leaves, about three feet long by six inches diameter."  
"That night the hyenas were more numerous than ever, as they gathered to fall on the refuse that had been left in the market-place. -- We left at an early hour in the morning, retracing our steps under the acacias and euphorbias. We came to Ija, but did not halt there."

- geol "Erta-ale was observed to show steam jets in 1841, 1875 and 1903. In May 1906 sulphurous emanations were associated with a night-glow and ejection of pyroclasts. Red-lit steam clouds rising for more than 70 m above the crater rims of Erta-ale and Kebrtit-ale were observed in 1919 and in 1928. In 1960 the crater of Erta-ale was observed by the

author to be filled with pasty, red-hot basalt lava from the centre of which projected a small cone of sulphur-rich material; a huge cloud of steam was rising from the crater, and extremely fresh steaming basalt flows had emerged from radial fissures on both the south and north flanks of the main cone."
