	The primary school in 1968 had 115 boys and 41 girls, with 3 teachers.		
??	Harefa (Haräfa) (historically recorded)	../..	[Pa]
	The people of Damot were vigorous opponents of Susneyos's attempts to introduce Roman Catholicism. He issued an edict around 1620 ordering them to cease celebrating the traditional Saturday Sabbath. Ras Se'elä Krestos launched a fierce attack on the Damots at Haräfa, where he burnt down their houses and captured many of their cattle. Peace negotiations were attempted, but failed. HDE53	Harengma (village north of Awash)	08/38	[x]
HCM45c	Harena (Harena) (forest & escarpment) <i>Podocarpus</i> woodland with twisted trunks draped in lichens, mosses and ferns. Wild coffee is found in the forest. Local demand for firewood is seriously threatening the vegetation. Dutch World Wide Fund for Nature is negotiating for a project there. During an expedition to the forest in the 1990s, four entirely new species of frogs were discovered in the time space of just three weeks. (A huge 32% of frog species in the country are endemic to Ethiopia.) [Lonely planet 2000 p 253-254, 36] "The forest is a jungle. Some of the trees are huge. The undergrowth looks impenetrably thick. Flowers of purple, yellow and red poke out unexpectedly among the trees. Odd shaped ivy-shrouded trees rise above the forest. The road cuts through the overhanging foliage, providing a narrow view of thick trees ahead. It is not a good road. Trucks had dug deep holes in various places during the rains, although it was passable with a good four-wheel drive -- (this was October 1999). The other fabulous thing about Harena was the wildlife. Baboons regularly trooped across	06/39	[Ca Br]

our path. We saw a big warthog disappearing into the bush. An unfortunate snake appeared suddenly in front of our tires. The best of all was a lioness who appeared ahead of us walking down the road --

The Harena forest was opened -- guidebooks say in the early 1980s, and is so rich in wildlife that biologists are apparently still identifying new species of butterflies (which were plentiful) and lizards. -- we had the painful experience of getting caught behind a very large herd of cattle on the way back -- after about twenty minutes we cleared the 100 or so cattle.

The Harena forest is part of Bale Park, so it is protected. -- Past the park habitation becomes much thicker, with lots of farmsteads and thinner foliage."

(which Haro or Haru?, a village in Kefa:)

According to a student that village did not want to collect money for a school built by ESBU (Sweden-assisted Elementary School Building Unit) because they already had a school building of chicka with two classrooms. They were forced by the authorities to collect the money but prevented from using the new building because it was not fully paid.

[Agneta Pleijel et al, Etiopien Kenya Tanzania Zambia, Sthlm 1971 p 58-59]

A nutrition survey was made in the months before the coffee harvest of 1968. The average intake per day and person was 979 calories (lowest case 563, highest case 1508). A current standard says that it ought to be 2500 so the result indicated general famine at that time of the year.
